Research focus of the Luxembourgish Youth Report 2015

- Youth is a **transition phase** between childhood and adulthood which leads to societal **integration** and the construction of the **individual biography** (Mørch, 2003)

- **Developmental tasks**: Independency, autonomy, identity, change of status/roles (Havighurst, 1972; Hurrelmann, 2012)

- Entry into adulthood marked by **five objective transition markers**:
  1. completing school,
  2. leaving home,
  3. **beginning one's professional career**
  4. getting married,
  5. becoming a parent
Research questions

A) How do social and family conditions influence the transition from youth to adulthood?

B) What are social or psychological effects of unemployment within the development of young people?
Underlying data and scientific methods

Analysis of secondary data
1. official data
2. census and survey data
3. research reports

Quantitative data
1. survey of organisations offering support (n=151)
2. standardized survey of participants in support services (n=1.716)

Qualitative data
1. expert interviews (n=25)
2. interviews with youths (n=77)
3. interviews with disabled young people (n=51)

Focus group discussion
(n=12)

Source: Census 2011; n=512,353

Nationality structure of 15 to 34 year-olds and of total population in 2011
The specific situation in Luxembourg – Educational qualification and nationality

Highest educational qualification of 25 to 34-year-olds by nationality

Source: Census 2011; n=63,719
The specific situation in Luxembourg – unemployment rate

Ratio between youth unemployment and general unemployment in 2014 in certain European countries

- Youth unemployment rate (EU: 21.9%; Lux: 22.0%)

- Youth unemployment rate in Luxembourg is **three times higher** than the unemployment rate for the population as a whole

- Young people without a Luxembourgish nationality are more often unemployed than young people with Luxembourgish nationality (for equal qualification)
The specific situation in Luxembourg

- Transition phase is **extended**, entry into working life is delayed (about 3 years)
- **Dynamic** labour market, high qualification requirements, very high job matching
- Low level of unemployment, rather **high youth unemployment** rate
- Competitive situation due to large number of **cross border commuters**
- High **immigration** rate, high population growth (since 1991: +40%)
- Segmentation of the employment market according to nationalities
- **Female activity** rate rising but still on average level (2014: 65,5%)
RESULTS

A) Influencing factors on the transition from youth to adulthood
Influencing factors on transition into work

Positive support
- Good qualification
- Good integration
- Self-determined
- Materialist satisfaction
- High self-fulfillment

Lacking support
- Low qualification
- Difficulties
- Initiative of others
- Loss of values
- Low self-fulfillment

Family resources
School career
Migration/Integration
Decision-making
Values/Motivation
Self-fulfillment/Attribution

promoting and impeding influences

Successful Transition
Direct Transition
Alternative Transition

Problematic Transition
Transition requiring support
Failed Transition
The influencing factors and assorted characteristics leads to a typology of transition processes

A) Direct transition
   – successful and speedy accomplishment of the transition

B) Alternative transition
   – individual, creative accomplishment of the transition, extended over a longer period for finding the own path

C) Transition requiring support
   – transition has not been finished yet, requires help due to major difficulties

D) Failed transition
   – transition cannot be expected to happen in the foreseeable future, precarious and highly problematic overall situation
Influence of social background and family resources on transition processes:

Social background and family resources

<table>
<thead>
<tr>
<th>Direct transition</th>
<th>Alternative transition</th>
<th>Transition requiring support</th>
<th>Failed transition</th>
</tr>
</thead>
<tbody>
<tr>
<td>“My parents are quite wealthy and therefore I didn’t need to work as many German students have to, and I could focus on my studies.” (Sam, 25 years)</td>
<td>“My parents never told me what to do, but they somehow supported me by saying ‘do what you want to do’.” (Égide, 28 years)</td>
<td>“No, I have nobody here. They all went back to France. We are two lost souls living all alone here in Luxembourg.” (Madeleine, 29 years)</td>
<td>“I’m angry because somehow they (my parents) are responsible for the difficulties in my life.” (Mathieu, 25 years)</td>
</tr>
</tbody>
</table>
Influence of school career and educational success on transition processes

School career and educational success

<table>

B) Social and psychological effects of unemployment on the development of young people?
Functions of work

Manifest function: Earn money

Latent functions:
- Identity
- Regular activities
- Collective objectives
- Time structure
- Social contact

If not available:
- Loss of self confidence
- Loss of self-efficacy
- Reduced ability to act
- Less participation on social activities
- Financial dependency on parents or others
- Resignation/pessimism about professional career
- Lost of daily structure
- Health problems
- Lack of autonomy

Model is based on the theory of Jahoda (1981, S. 188)
Effects of unemployment

A) Decreasing self-confidence

“What I can do well? Nothing. Really… nothing. (…) Until now I have no idea of what I am good at.” (Jeff, 27 years)

“It fealt like a defeat. If I had to blame someone, I would put the blame on myself.” (Paolo, 27 years)

B) Reduced ability to act (e.g. locking-in-effect (Hardly any applications) )

”I tried but I don’t find an employer…I will never get a chance.” (Nadine, 29 years)
Effects of unemployment

C) Resignation, giving up career aspirations, pessimism about the future

“I am rather negative. I always think negatively.” (Chiara, 18 years)

“I have no choice, I keep going on, of course in the hope of finding something. But when?” (Madeleine, 29 years)

“The main thing is to make some money. (...) Just to have a work and to have a bit of money. (...) I would do anything, I would never refuse a job.” (Mathieu, 25 years)

Quantitative Study:
Thinking on my vocational future, I ‘m feeling helpless! 65,9 % agreement
I would accept any kind of work, the main thing is to have work! 65,1 % agreement
Effects of unemployment

D) Loss of self-efficacy

“You lose your self-confidence and some day you think, I cannot accomplish anything, I cannot handle anything” (Simone, 23 Jahre)

“What I can? Nothing, really nothing!” (Jeff, 27 years)

Quantitative Study:
Self-efficacy value M: 3,82 ( N=1162 job seekers) is significant lower than the reference group (GESA)
Effects of unemployment

E) Lack of autonomy

“I want to live in an own apartment. I want to be self-sufficient (…) manage my life alone (…)I really want to leave home I am fed up with the whole shebang.” (Alessandro, 19 years)

I want to stand by myself. I want to live alone (…) want to have my own life.” (Nicole, 25 years)
Effects of unemployment

F) Health problems

“Depression (…) the time without work, I was only at home, I have not spoken with anybody” (Jeff, 27 years)

“If you work you are worthwhile (…) I have no work for one year, I suffer from depression, you get really sick.” (Nadine, 29 years)
Effects of unemployment

G) Less participation on social activities

“I cannot participate in social life, I would like to register for an association but I have no money (...) nothing is sure.” (Paolo, 27 years)

“If I want to go out with friends, I can’t do so (...) I have to save money (...) I don’t have the money.” (Alessandro, 19 years).
Effects of unemployment

H) Lack of daily structure

“For me it’s important to have a regular everyday life. I want to work in order to have a reason to get up in the morning.” (Simone, 23 years)

« I want to have a work, only to have a structure in my daily life. » (René, 20 years)

« I have no work, I have no rhythm in my life, it would be so good to have a work, to have a function. » (Linda, 22 years)
Effects of unemployment

I) Financial dependency on parents or other supporting systems

“To by own things, to have own money not to have begging for money but to earn own money.” (Jeremy, 19 years)

“It is not your own money you have to ask the parents for money, that ‘s rather bad.” (Paolo, 27 years)
